

GEMINI

Fusion²

NOW EXCLUSIVELY FROM
WATERITE TECHNOLOGIES

Waterite's new **Gemini Dual Tank Water Softening System** is the latest member of Waterite's Fusion² family of advanced water softeners. Perfect for a wide range of light commercial and more-demanding residential applications, the Gemini system employs a single valve that alternates between two mineral tanks, eliminating system downtime for resin bed regeneration and offering users seamless, soft-water service.

Gemini Dual Tank softeners range in sizes from 30,000 grains of hardness capacity to 150,000 grains. When one resin tank nears capacity, Gemini's advanced electronic control automatically switches service flow to the second tank and begins the regeneration cycle on the first tank. Practicality, value and ease of operation all combine to make Gemini softeners the obvious choice in a wide range of softening applications.

The heart of the **Gemini Dual Tank** system is its electronic control valve, sharing most critical valve parts with other Fusion² products and keeping service simple. Systems boast dual matching tank jackets, bypass valves with connectors and attractive Fusion trim. Gemini packages are rounded out with Waterite's premium resin and comprehensive warranty.

Fusion² GEMINI CONTROL VALVE SPECIFICATIONS

Inlet/Outlet Fittings	¾" to 1 ½"
Cycles	Up to 9
Regeneration	Upflow or downflow
Max Operating Pressure	125 PSI
Drain Line	¾" or 1" NPT
Service @ 15 PSI Δp	30 USGPM
Power Supply	120VAC
Valve Material:	Noryl or equivalent
Tank Applications (Filter or Softener)	6" - 21"
